Introduction

Matching Tool: To enable smooth matching of mentors and mentees there is a tool on SuccessFactors (SF), which all Registered Engineers (REs) should ensure they are registered on. If you are registered with the Engineering Council UK (ECUK) through a Professional Engineering Institution (PEI) in any categories of registration listed below please ensure you are listed on the SF Mentoring Tool and have entered professional memberships on your SF Employee Profile:

- Information and Communication Technology Technician (ICTTech)
- Engineering Technician (EngTech)
- Incorporated Engineer (IEng)
- Chartered Engineer (CEng)

Master List: The mentoring programme along with "Professional Memberships" details logged on SF Employee Profiles will be Jaguar Land Rover's master list for communication to our Registered Engineer (RE) community and for the repayment of membership fees for mentors. The master list will also be used to keep the RE boards on display in the JLR site receptions up to date, therefore it is important that all REs, new and existing record their professional registration on this system.

Fees: Registration on the SF tool is not mandatory, however If you are not on the system and paired with a mentee on this mentoring tool your fees may not be paid. Please see section on fees in the Engineering Professional Registration Manual for fees guidance. The tool will also be used to audit mentees on the IMechE MPDS for proper activity, before paying annual MPDS fees.

Training: Active mentors will be required to stay up to date with their mentor training, which can be done online via SF or the IMechE and also as Face to Face training bookable through SF

Inactivity: If a mentee has not been active for 6 months and they have not provided a reason or been in contact, please end the mentor / Mentee relationship and inform the PEDC via the profeng@jaguarlandrover.com email. We do not want to continue supporting people who are not invested in their own development. Due to the new intakes of graduates, Undergraduates and Apprentices there will be plenty looking for a mentor to support their development of to assist with direct applications. Mentees are also asked to end the relationship if they have not been able to get in touch with their mentor and should also contact the PEDC via the profeng@jaguarlandrover.com email to inform the team.

General Note

IEng and CEng mentors can support and mentor ICTTech, EngTech, IEng and CEng mentees. However, mentors should ensure they are fully aware of the differences between the competences required for ant of the 4 Categories they are willing to support.

When it comes to interview IEng mentors can be a secondary sponsor for a CEng applicant, but a primary CEng sponsor will be normally be required to support the application. Those registered at ICTTech / EngTech may only support ICTTech / EngTech applications.

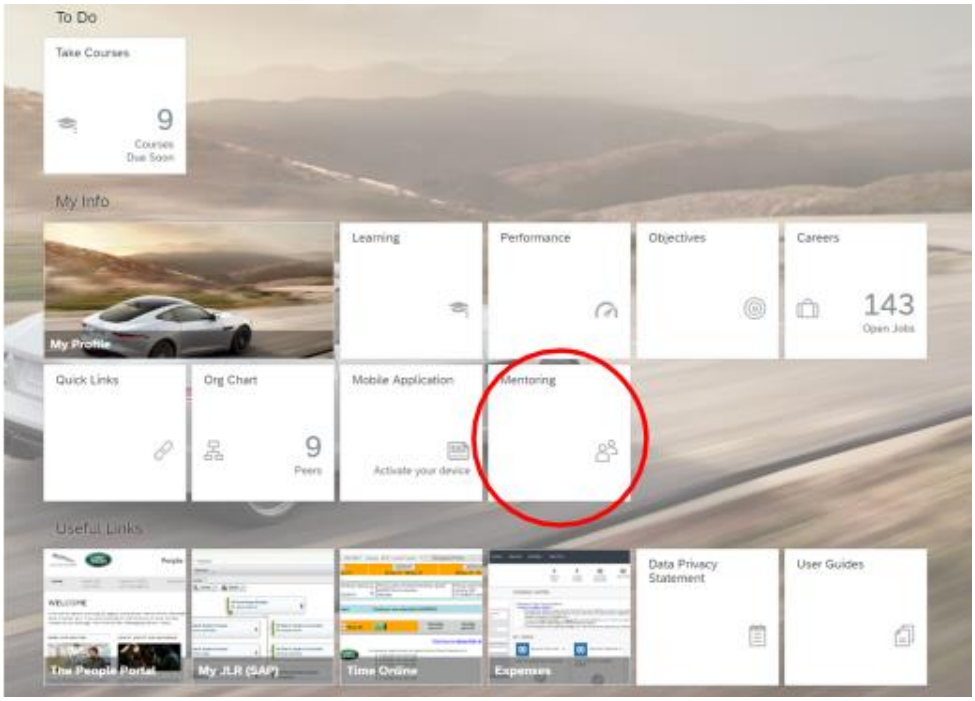
Mentor Note

Prior to beginning the sign up process, mentors will be required to provide evidence of professional status; this may include your PEI membership certificate, a congratulatory email, any official document from the institute with your post-nominal title included or a screenshot of your status from your login page on your institute's website.

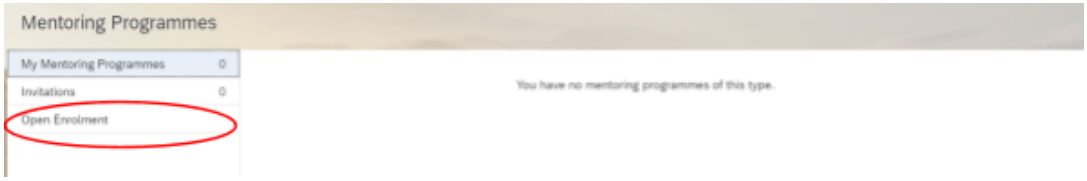
Step-by-Step Guide

Step 1 Log In: Log into SuccessFactors via the People Portal.

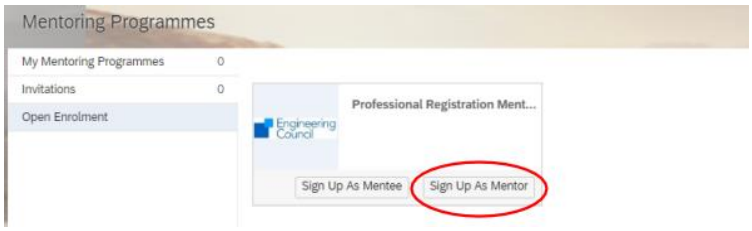
Step 2 Select Mentoring: Select the “Mentoring” tile on the home page or search for mentoring if your home screen does not show the tile.



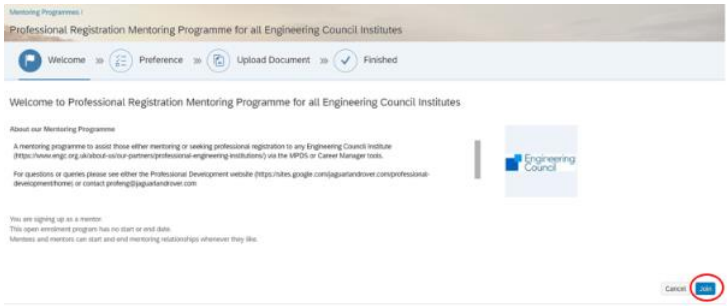
Step 3 Open Enrolment: Click on the ‘Open Enrolment’ tab on the left hand side



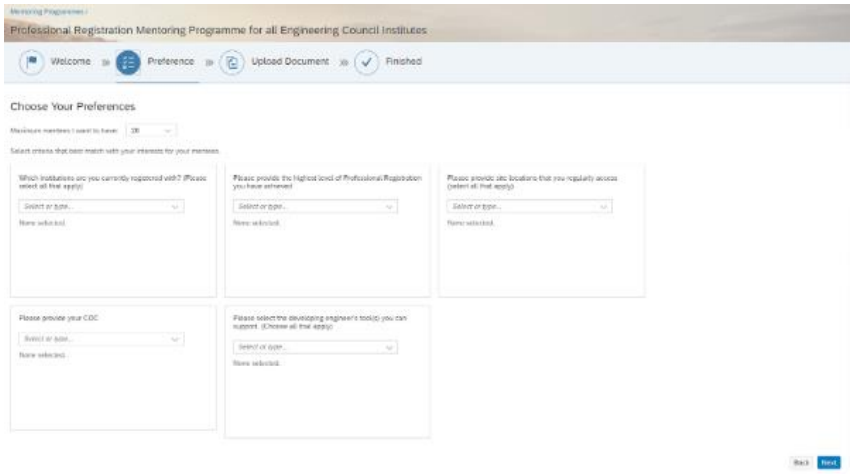
Step 4 Select Mentee or Mentor: Select/Search for the “Professional Registration Mentoring Programme for all Engineering Council Institutes” Mentoring program and click on ‘Sign Up As Mentor’ or ‘Sign Up As Mentee’



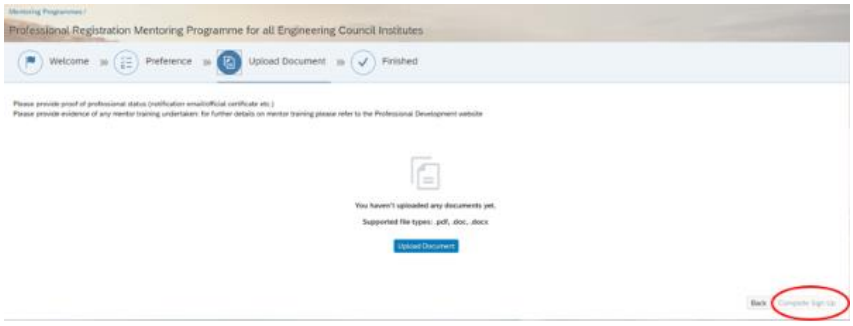
Step 5 Join: Click ‘Join’



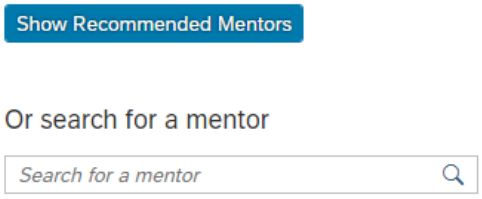
Step 6 Fill the Form: Fill in the sign-up form, providing information about the institute(s) you are affiliated with or a member of, your location, COC and the tools or route you wish to use, or are competent to support. This system will also be used to support direct applications for all 4 categories and also to assist with election to fellow with any PEI.



Step 7A Mentors Proof of Registration: Please upload proof of your professional registration status, such as a notification email or certificate. Also submit evidence of any mentor training you have completed. Then click 'complete sign up'.



Step 7B Mentee Search for Mentor: On completion of all the details Mentees will be able to search for suitable mentors. This search is done on a best match, however if there is someone in particular a mentee would like to mentor them they can search for a specific name.



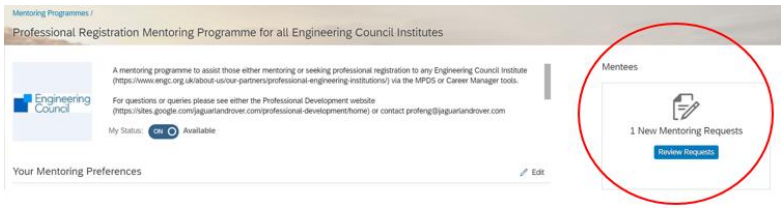
Mentee Note

When selecting a mentor please contact the mentor directly before making the selection and importantly mentees ***only select one mentor****. If that relationship does not work then and only then should an alternate mentor be requested and selected.*

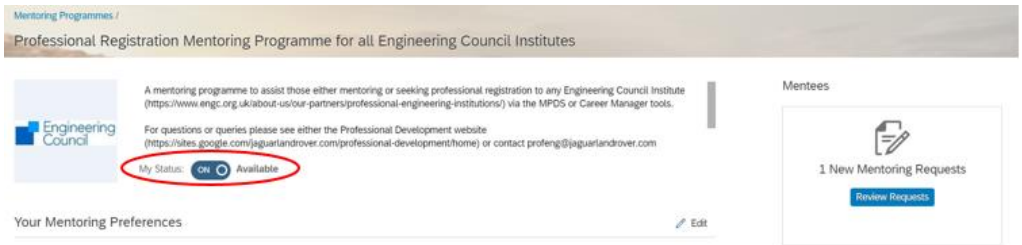
Step 8A Mentor Approval: Your application will be approved by the PEDC team, however the team may be in contact if they require further information or clarification. Once mentor applications have been approved mentors will receive an email and be viewable to new mentees as a potential mentor.

Step 9A System Email to Mentor: All mentee / mentor relationships should be matched and recorded on this system and mentors will receive the following email asking to approve the mentoring request.

Step 10A Mentor Accepts Request: On receipt of a request email Mentors should login to SuccessFactors and access the mentoring tool, there will be a mentoring request awaiting approval. mentors can accept or decline the request, but it should not be a surprise if Mentees have followed this guide.



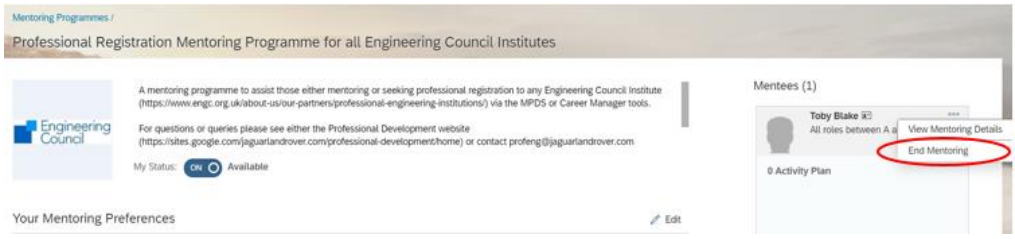
Step 11 Mentor Availability: When mentors have the maximum number of mentees (a maximum of 2 is recommended) they wish to mentor, or do not wish to be a mentor, they can mark them self as unavailable. To all potential mentors please do register on the system though, as it will help with communicating information to our valued professionally registered engineers and ensure your name appears on the Professional Registration Display Boards found in most JLR site receptions.



Mentor Note

A current system limitation has an ongoing 20 mentee limit is across the entire length of the mentoring programme rather than a limit of mentees at a time. Therefore, we currently recommend mentors keep the limit at 20 and mark themselves as unavailable when they have enough mentees at one time.

Step 12 End of Relationship: Once a mentees have gains professional registration the formal mentoring relationship will end, though of course both parties will probably have formed a close working relationship and will stay in touch. When Registered the mentee must register as a registered engineer on the SF Mentoring System. A mentoring relationship may also end if a mentee has been inactive for several months and has not provided a reason or been in contact. The relationship can also be ended by the Mentee for similar reasons.



Feedback: Any suggestions for improvement, corrections or general feedback on the process or system should be sent to the PEDC email account, profeng@jaguarlandrover.com, so that the best service can be provided utilising this tool and the guidance provided.
