Introduction

This annex to the Professional Registration Manual and Policy is the guide for all Technicians and Engineers who want to explore formal further learning as a route to the next category of professional registration with an appropriate Institution as an employee of Jaguar Land Rover (JLR).

Competence

To achieve registration each individual's competence and commitment is independently and thoroughly assessed by their peers from the Engineering Council UK (EC^{UK}) licensed Professional Engineering Institution (PEI) they have chosen to apply to. These assessments are carried out against the standards laid down in the UK Standard for Professional Engineering Competence (UK Spec) published by the EC^{UK}. The 5 Competency areas are:

A. Knowledge and understanding
B. Design and development of processes, systems, services and products
C. Responsibility, management or leadership
D. Communication and inter-personal skills
E. Professional commitment

Underpinning Knowledge and Understanding

In order to achieve any registered technician or engineer status in any of the categories it is necessary to demonstrate an appropriate level of Underpinning Knowledge and Understanding (UK&U). There are several ways in which UK&U gaps can be bridged, or demonstrated, and each institute has its own specific guidelines and methods.

Firstly EC^{UK} and the PEIs maintain lists of accredited and approved qualifications. Guidance should be sought from PEDC and the Professional Development Team if your qualification does not appear on the approved list or you do not have a qualification at the level indicated for the desired category of registration.

If the individual has not got the appropriate level of qualification one of the ways of bridging the gap this is to undertake formal further learning to demonstrate Level 3, Bachelors or Masters levels of engineering knowledge depending on whether they are aiming for EngTech, IEng or CEng status.

Applicability and Target Groups

All technicians and engineers can apply for further learning appropriate to their prior qualifications and category of registration. The vast majority of those requesting further learning are expected to come from those with BEng qualifications who wish to progress to Chartered status thus requiring the ability to demonstrate Masters level engineering knowledge.

There are other ways of gaining and demonstrating the required level of knowledge and these must be considered ahead of commencement of any formal further Learning and the associated costs involved.

Further Learning for EngTech

EngTech Registration is centred around demonstration of UK&U at Level 3 or higher and it is not anticipated that a formal further learning process is required to achieve the level required to apply for EngTech. Should individuals be advised by their chosen institution that a formal qualification is required further guidance should be sought from the professional development team to discover what routes might be available.

Further Learning for IEng

IEng Registration is centred on demonstration of UK&U at Bachelors and it is not anticipated that a distinct formal further learning process would be made available. There are already routes available for suitable individuals to enrol on degree courses to develop their engineering knowledge and the only additional consideration should be that the course chosen should be accredited for IEng or Partial CEng by appropriate PEIs separately.

Further Learning for CEng

To achieve CEng individuals must be able to demonstrate Engineering UK&U at Masters level and one way to achieve this is through further learning. If your professional institution has advised that this is an appropriate route then there are 3 main options potentially available to bridge the Bachelors to Masters Gap.

Accredited Further Learning Scheme

In some cases and a fairly common route for those on graduate schemes it might be appropriate for the individual to carry out minimal formal further academic learning to bridge the knowledge gap from Bachelors to Master as part of an accredited further learning scheme. JLR have worked in conjunction with the IMechE to have a method involving TAS modules accredited. While this method is only accredited by the IMechE it may be acceptable as evidence for other Institutions as sufficient demonstration of UK&U for CEng.

If you do not have an accredited Masters level degree then you may choose to use this route and fulfil the following requirements of further learning in order to apply to become a Chartered Engineer:

- Hold an accredited Bachelor level degree in an Engineering Subject
- If your Bachelor degree is not already accredited you can request that the IMechE assess your degree while you are completing your further learning
- Complete 30 credits worth of Engineering and Science Deepening TAS modules
- Complete a Work Based Learning and Training Competency Report
- Be or gain promotion to become a C Grade Engineer

TAS Modules

To complete your further learning requirements individuals must complete 30 credits worth of Engineering and Science Deepening Modules. The full list of TAS modules available, which category they come under and how many credits they are worth can be downloaded from the PEDC website. These modules are requested through SuccessFactors Learning.

Work Based Learning and Training

There are 10 approved work based competencies:

- Product Design & Development
- Customer Knowledge
- Product Knowledge
- Financial Awareness
- Planning & Organisation
- Problem Solving
- Strategic Awareness
- Quality, Robustness & Reliability
- Sustainability Development Awareness
- Production Launch

You must write and submit a report explaining how you have met these competencies and your supervisor will approve your report and rate you on each of them. You must achieve a status of USER, or better, in 6 out of the 10 competencies. A template for the report can be downloaded from the PEDC website. We suggest that you review the competencies you are aiming for with your manager and agree with them projects and work that will help you achieve them.

In addition to work based learning, you can opt to take Technical and Non-technical broadening modules in place of some of the competencies. Please note that these modules are in addition to the 2 Engineering Science and Deepening Modules. If you plan to take extra modules, please check with the IMechE which modules you plan to take and which other competencies you are offering through work based learning to ensure there is no duplication.

The Further Learning Application

Once you have completed all of your further learning, you must submit evidence to the IMechE. This can be in the form of:

- University Degree Certificate
- University transcripts detailing modules completed
- Training course certificate displaying assessment (not attendance)
- Work Based Learning Assessment Report

Photocopies of the evidence must be signed by an approver with the statement 'this is a true and fair copy of the original'. They should also print in block capitals their name, position, organisation and Membership number. Depending on the evidence being submitted, the approver could be:

- The University
- A Chartered or Incorporated Engineer
- A Senior Manager
- The HR department

Intent to Apply and Queries

If you are intending on going through the further learning scheme you must register your intent to carry out Accredited Further Learning with the IMechE at furtherlearning@imeche.org. This email is also used to submit further learning evidence or for any other queries on the IMechE accredited further learning scheme.

Full MSc

One way of demonstrating full masters level UK&U is to complete a full MSc, but this can be an expensive process for the individual and business. The expense is not just financial, but includes the vast amount of time required to study for and complete each of the modules. Those choosing this route are encouraged to seek advice from managers, mentors and their institution before making any decisions on which course to take and how it is going to be funded. A full MSc is achievable through taking TAS modules, but individuals must ensure the modules are appropriate to be used to demonstrate UK&U to their institution and also that their business area is willing to pay the module fees.

Post Graduate Diploma (Level 7 Apprenticeship) In Development

This route is available on application and agreement from your line management and is funded by the apprenticeship levy. Modules are taken over a 3 to 4 year period and on successful completion of all the modules the apprentice id awarded a Post Graduate Diploma in the course chosen. Most of the modules are fixed to ensure the degree can be accredited with an appropriate PEI, however there are optional modules which can be chosen to provide some flexibility. This is equivalent to the MSc Route and does require 20% of the working week across the duration of the apprenticeship to be spent dedicated to Off the Job Training (OJT). Details on this route will be on SuccessFactors or by talking to the learning and development team.

Completion of Further Learning

On completion of any further learning that was intended to assist with professional registration the individual may or may not be ready for application to their PEI and individuals are encouraged to talk to their mentor, or local representative, for advice. Please refer back to the Routes to Registration Guide for details on the appropriate route for final application.
